

# STEM Activity 2018

Code + Create  
編碼行空

'Code + Create' is a 6-Day workshop organized by Kids4kids in the end of June 2019. It combines two components - storytelling and computer science together. During the workshop, students learnt to use new computer programmes, 'Google CS First Curriculum' and 'Scratch', as the tools for students to present their stories.

Students learnt different coding skills in the workshop. They made stories and mini games with different codes. They enjoyed sharing their works at the end of each session. Everyone was satisfied with his or her work and grateful to the student tutors.

They are learning to use a new computer programme.

The student tutors are teaching our students patiently.

Look! Students are satisfied with their design.

All our students and student tutors work well with one another. They complete their tasks successfully.
